EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Christina L. Mangelson on 3/16/05.

2. The application has been amended as follows:

- In claim 1, line 3, -- , wherein the reactor is a fluidized bed reactor fluidized with carbon dioxide -- has been inserted after "reactor".
- Claim 6 has been cancelled.
- In claim 11, line 7 after "temperature"; -- to form a carbon-containing radical -- has been inserted.
- In claim 22, line 3 after "nitrogen oxide compounds;" , -- indirectly heating the waste or gaseous stream to a reaction temperature; -- has been inserted.
- In claim 22, line 9 after "radical", -- at the reaction temperature -- has been inserted.

3. The following is an examiner's statement of reasons for allowance: The instant application is allowable over the cited prior art, because the cited prior art fails to disclose a waste stream treatment method comprising: feeding a waste stream comprising nitrates, nitrites, or mixtures thereof to a reactor; wherein the reactor is a fluidized bed reactor fluidized with carbon dioxide; heating the reactor to a reaction temperature; feeding a carbon-containing additive to the

Art Unit: 1754

reactor; decomposing the carbon-containing additive to form a carbon-containing radical; and reducing the nitrites, nitrates, or mixtures thereof via reaction with the carbon-containing radical to a product stream, wherein the product stream comprises nitrogen gas, carbonate salts, and at least one of carbon monoxide and carbon dioxide.

Mason (US Patent 6,280,694) discloses the utilization of carbonous materials as the heat source in the single stage denitration process. Specifically according to Mason, the carbonous materials are steam reformed to form CO/CO₂, which serve as gaseous reducing agents and also serve to generate heat in the reactor (see col. 2, lines 17-34).

In the present invention, in contrast, a reducing environment is maintained in the reactor and the carbon-containing radical formed from decomposition of the additive is the reducing agent. Furthermore, the present invention utilizes a fluidization medium of carbon dioxide, as well as wherein indirectly heating the reactor to a reaction temperature.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
